brian-novoa.com

Hi, I'm Brian, a web developer with over 4 years of experience in web development and 2 years in web application development. My passion for technology has led me to specialize in frontend technologies such as React, JavaScript and TypeScript, although I have also explored the backend world through personal projects using Node.js, Express and MongoDB.

Currently, I am part of the Accenture team, where I work in the configuration of infrastructure and services for high profile clients, managing advanced technologies such as MPLS, VPLS and SDWAN. This experience has not only allowed me to deepen my technical knowledge, but also to strengthen my interdisciplinary collaboration and project management skills in complex environments.
